

CORNING

Meet Our New Jumper in a Box

Eco-Friendly Design for Data Center Environments

The Corning jumper in a box (JIAB) is an innovative packaging solution that holds up to 70 jumpers with a small, stackable footprint. With a self-tracking inventory feature and bold, color-coded part identification, it's never been easier to order exactly what you need. Options include single-mode and multimode LC uniboot configurations in a variety of lengths, up to 20 m.

And now, our JIAB has a new environmentally friendly design. The redesign has no cardboard and is made of corrugated plastic. This will allow our customers to take the JIAB inside data centers for use during installations. The new JIAB can also be left inside data centers for easy storage.

**Empowering the World With Data
Center Solutions You Can Trust**

We pack. You stack. It tracks. It's that easy!
