004-281-AEN	Instruction, Sheath Removal of 1728-Fiber RocketRibbon™ Extreme-Density Cable
004-098	Instruction, Ribbon Splitting Tool (RST-000)

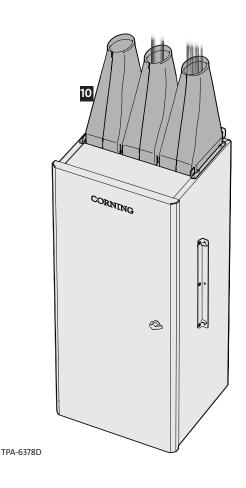

#### General

This document describes the installation of the RocketRibbon™ Extreme-Density Optical Splice Enclosure (RXD).

#### Carton Contents

- RocketRibbon™ Extreme-Density Optical Splice Enclosure (P/N RXD-OSE-1 or RXD-OSE-1L, RXD-OSE-1-HD, or RXD-OSE-1L-HD)
  - 1 (24) 288f Splice trays (RXD-OSE-1 or RXD-OSE-1L)
  - 2 (24) 576f Splice trays (RXD-OSE-1-HD, or RXD-OSE-1L-HD)
  - 3 (192) Corrugated tubing
  - 4 (192) 2-in heat-shrink tubing
  - 5 (200) 10.75-in cable ties
  - 6 (200) 4-in cable ties
  - 7 (1) Ground lug
  - 8 (54) Cable retention clips
  - 9 (2) Mounting brackets
  - 10 Mounting brackets and cable covers

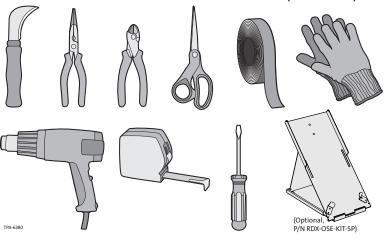

### 3. Tools and Materials Required

- Utility knife with hook-blade and straight blade
- Needle-nose pliers
- Diagonal cutting pliers (side cutters) (P/N 100300-01)
- Scissors (P/N 100294-01)

- Friction tape
- Gloves
- Heat gun
- Screwdriver
- Tape measure (P/N 2102003-01)
- (OPTIONAL) Service platform

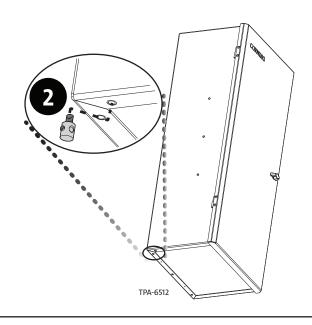

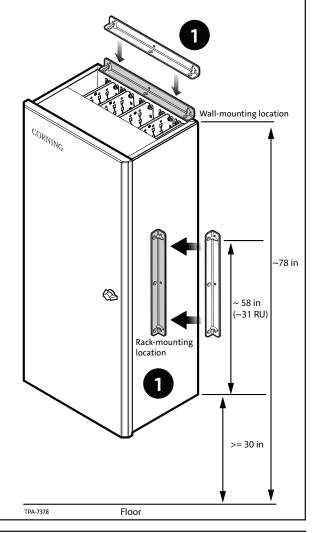

#### 4. Installation

Step 1: Use one of the brackets to mark the initial mounting position, then install mounting bracket for 19-in rack or wall mounting.

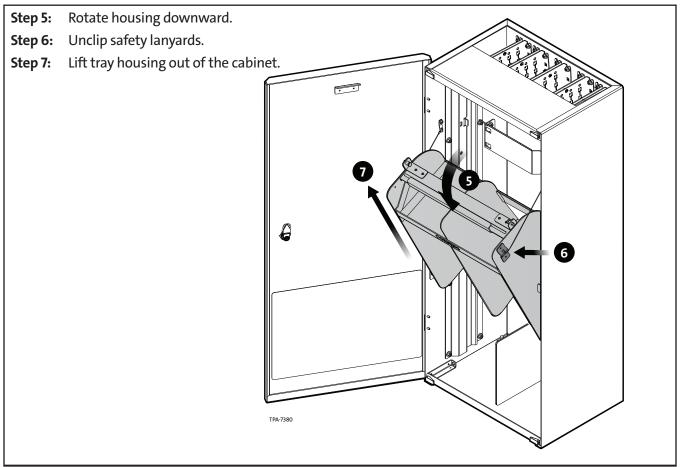

Mount in desired location using fasteners appropriate for the mounting surface.

**Step 2:** Ground the cabinet per local codes and standard company procedures.

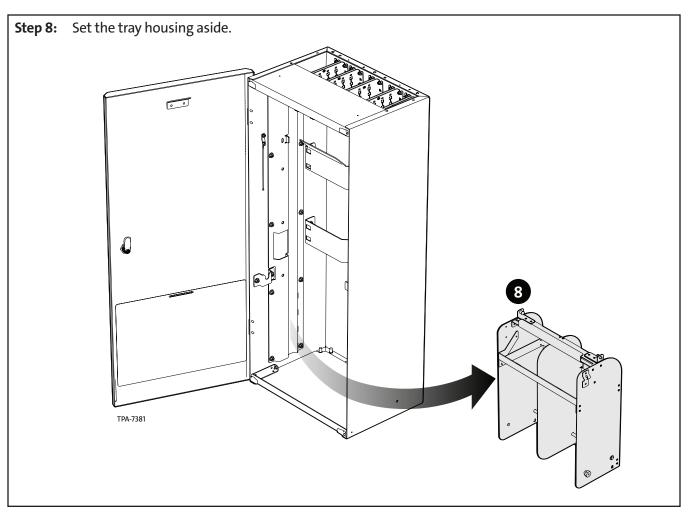

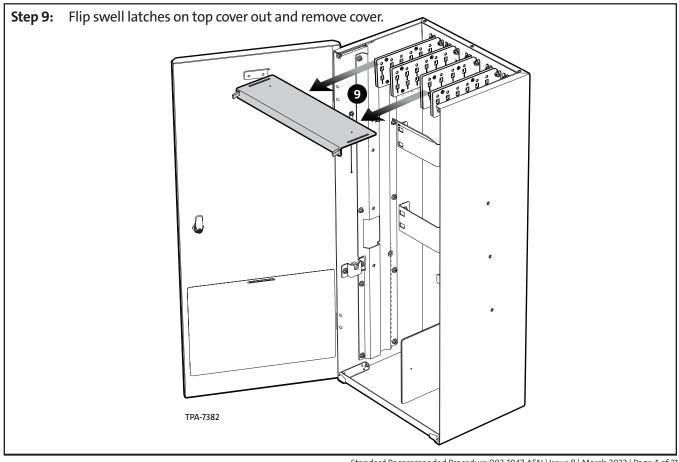

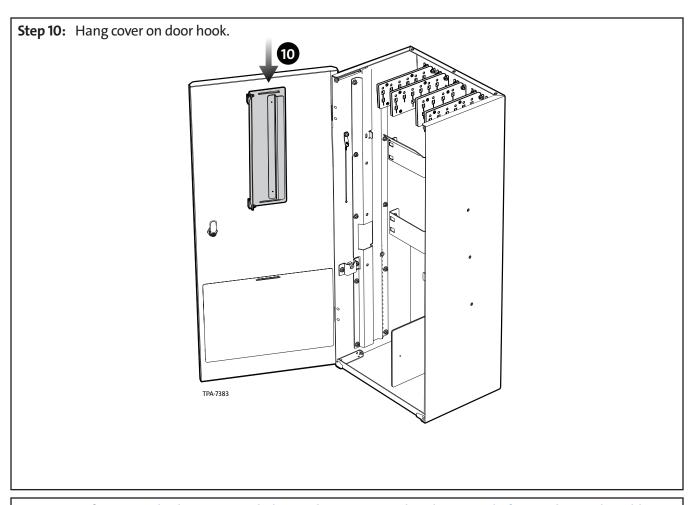

Step 3: Rotate latch to open door.
Step 4: Release plungers on each side of the tray housing.

Standard Recommended Procedure 003-1047-AEN | Issue 8 | March 2022 | Page 3 of 21

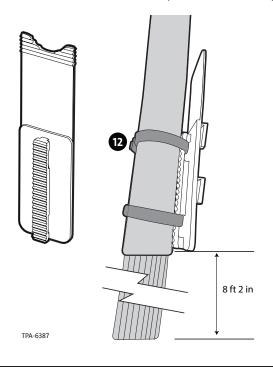

Step 11: Refer to Standard Recommended Procedure 004-281, Sheath Removal of 1728-Fiber RocketRibbon™

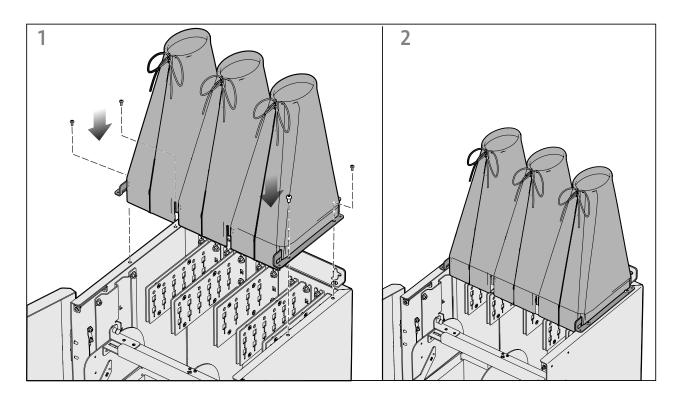

Extreme-Density Cable, for directions on removing the cable sheath from 10 ft from the end of the cable to expose the routable subunits.

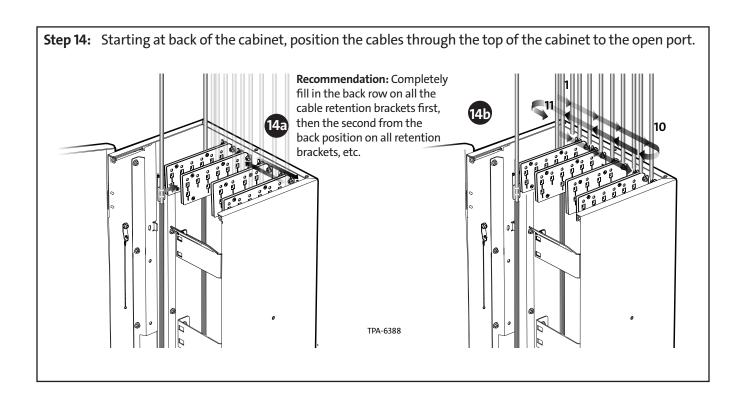

**Step 12:** With 10.75-in cable ties, position cable retention clip on the cable at the end of the cable sheath.

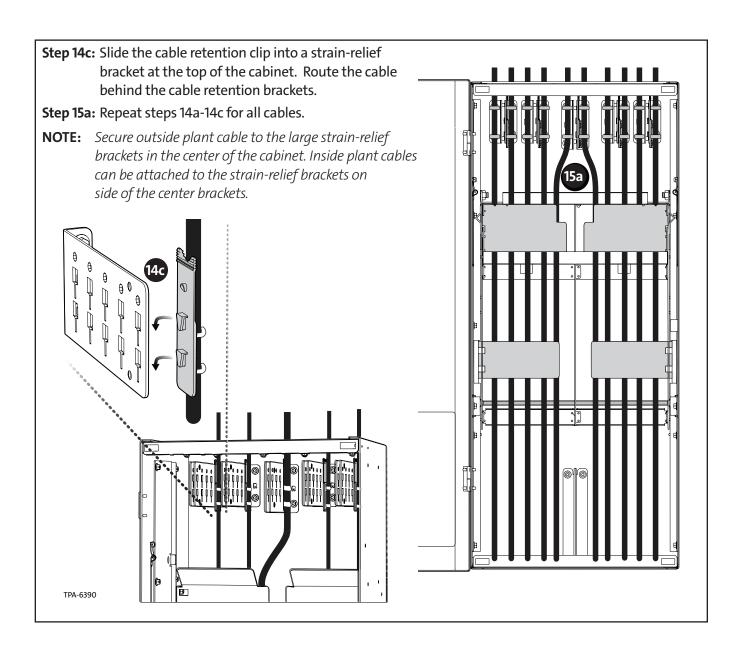

**IMPORTANT:** Strain-relieve the cable outside the enclosure per standard company practices.

**Step 13:** Install cable cover kit.

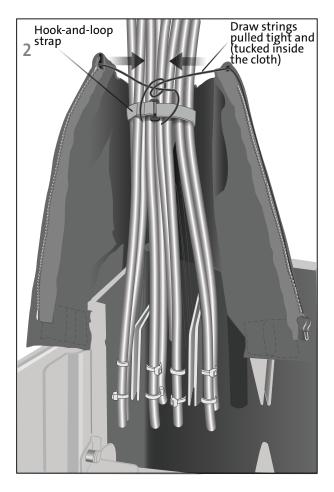

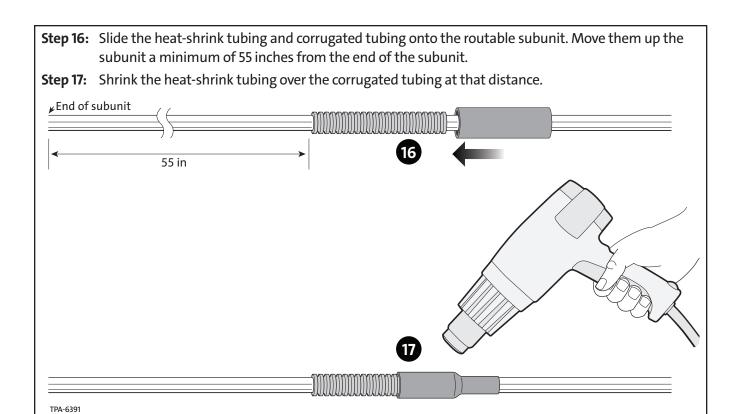

**Step 15b:** Until the draw strings and unzip the surrounding cover. Install the hook-and-loop strap to make sure the cables are grouped tightly together.

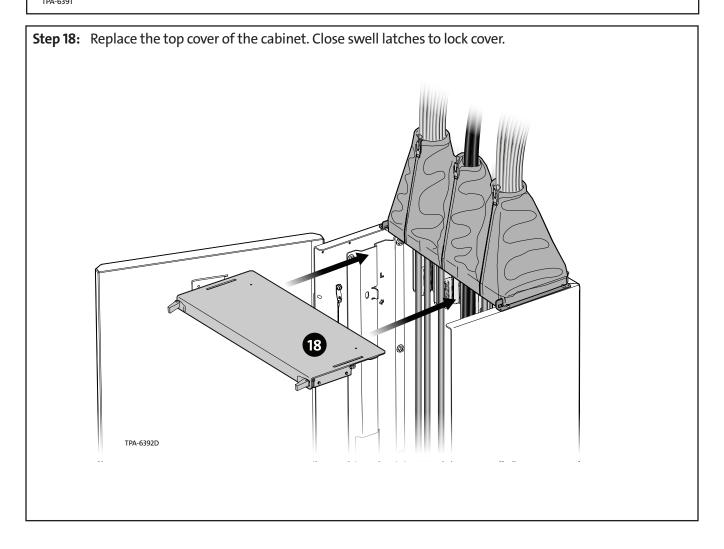

1

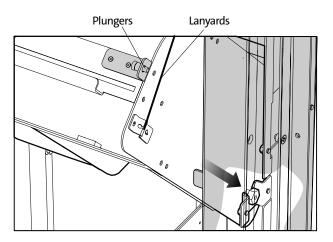

**Step 19:** Reinstall the splice tray housing and reattach the safety lanyards.

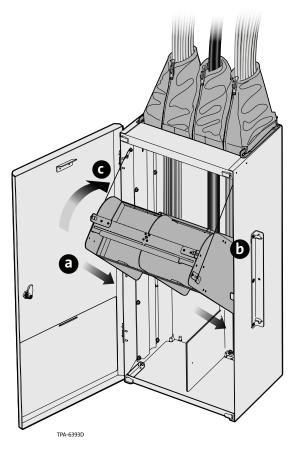

**Step 20:** Slide the housing down into the securing slots.

**Step 21:** Reattach the lanyards to the housing.

**Step 22:** Ensure the plungers click into place to secure the housing.

**IMPORTANT:** Ensure the plungers click in place to secure the housing.

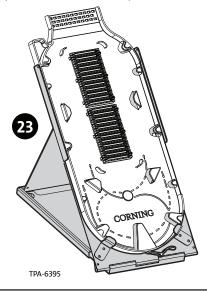

IMPORTANT: Hold on to the top and bottom of the splice housing when installing into the enclosure. Set the hardware into securing slots and then reattach lanyards to housing.

**Step 23:** Bring a tray to a 30-in high work surface in front of the cabinet. Remove the plastic cover from the tray.

**Step 23b:** An optional service platform (P/N RDX-OSE-KIT-SP) is available to assist with the splicing operation.

**NOTE:** Reference section 5 for routing diagrams for 576f

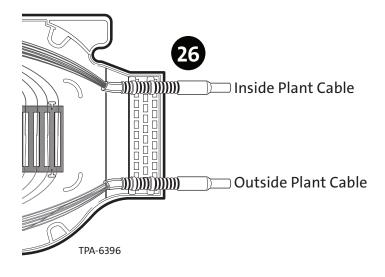

tray.

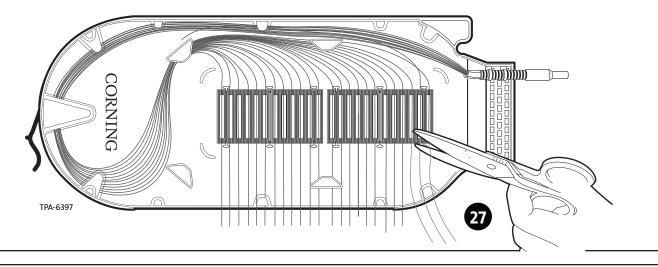

**Step 24:** Select the appropriate feeder and distribution routable subunits.

**Step 25:** Refer to <u>Standard Recommended Procedure 004-281</u>, <u>Sheath Removal of 1728-Fiber RocketRibbon™</u> Extreme-Density Cable, for preparing the routable subunits.

**Step 26:** Secure the corrugated tubing to the splice tray with cable ties.

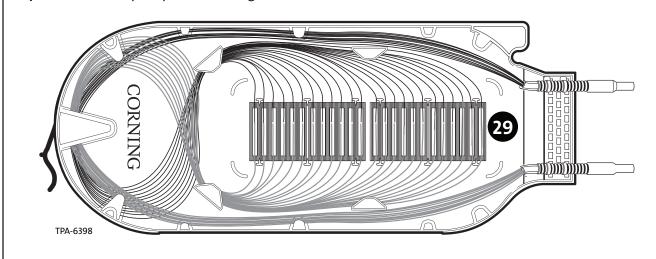

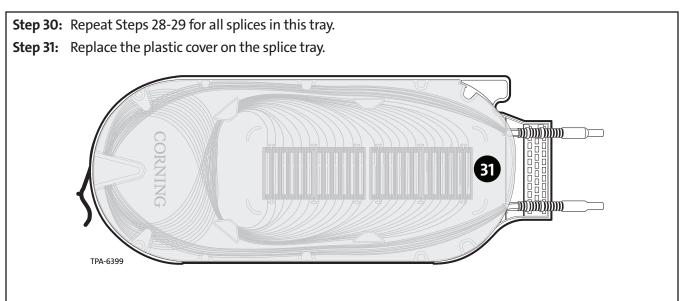

**Step 27:** Pre-route and measure each fiber ribbon to its splice location in the organizer. Cut the ribbon at the splice point. Repeat for all subunits in the tray. Refer to section 5.3 at the end of this document for additional guidance on ribbon organization within the splice tray.

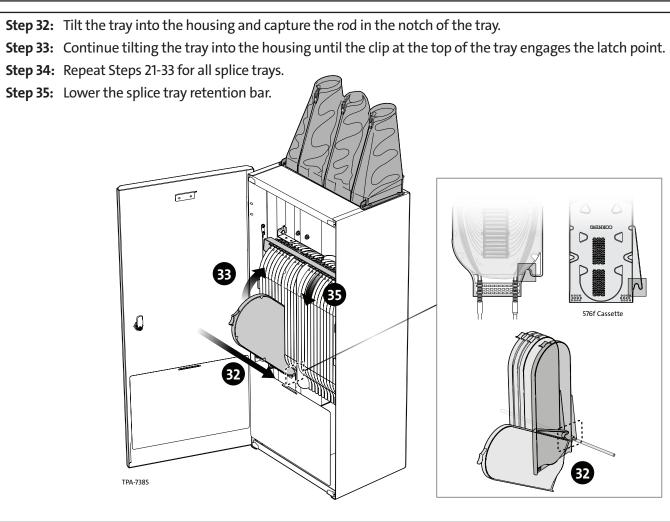

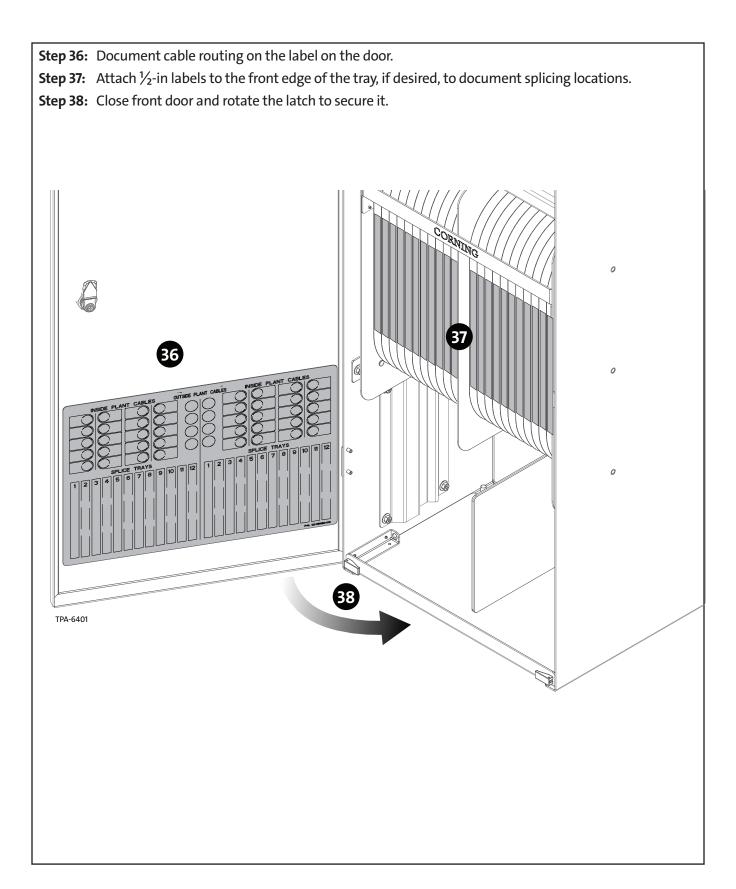

**Step 28:** Splice using 40 mm heat-shrink tubes per the instructions provided with the splicing equipment.

Subunit turned to get the blue fiber on top inside of the tray.

**NOTE:** When splicing cables with routable subunits, the end of the subunit that you are working with is important as it relates to the organization of the ribbons within that subunit and must be checked prior to splicing. Depending on the orientation of the subunit (orientation #1 or orientation #2 in the images above), the ribbons from the routable subunit may have to be re-organized inside of the tray. Notice that the side of the ribbon stack that ribbon 1 is on is different depending on the orientation of the subunit once it is turned on its side so the ribbons are vertical for optimal routing inside of the tray. Re-organize the ribbons as needed inside of the tray to get the ribbons into the correct order for your system's specific design and polarity management.
