# Corning Field-Installable Connector Training

## Corning OptiSnap® and Field-Installable OptiTap® (FIOT) training is now available for Charter.

Currently, training is available for both the Charter-approved OptiSnap and FIOT connectors. You may request training for one or both training topics at the same time. All training is performed virtually or in person (if available) at your convenience. Please follow the steps below to schedule and prepare for your training.

### How do I request a training?

Please contact your local sales representative to request closure training for OptiSnap and FIOT connectors. Your sales representative will work with you on the specific dates and times and provide you with a link to attend (if virtual). Prepare for at least one hour of training for each topic.

### What materials do I need?

We would like technicians to be prepared with either or both FIOT installation toolkits, FIOT connectors, and ROC™ drop cable as well as OptiSnap™ installation toolkits, OptiSnap connectors, and SST-Drop™ cable.

### How should I prepare?

Please have the kits, connectors, and cable on a table in front of you to either follow-along or refer to throughout the training. Please also be prepared with any additional materials required (below), and review the SRPs and installation videos for each connector/kit before class (all provided below).
