

Exceptional Dimensional Stability and Surface Quality in Thin, Large-Size Sheets

Corning[®] EAGLE XG[®] Glass is considered the most widely used and trusted glass by the world's leading panel makers, and was the first glass composition to include no heavy metals. Available in the widest variety of form factors, EAGLE XG[®] Glass can be made as thin as 0.25 mm up to Gen 5.5, 0.3 mm up to Gen 6, 0.4 mm up to Gen 8.5, and 0.5 mm up to Gen 10.5 to enable thinner, lighter, and curved display panels.

Chemical Durability

Chemical durability is measured via weight loss per surface area after immersion. Values are highly dependent upon actual testing conditions. Unless other-wise noted, concentrations refer to weight percent

Reagents	Time	Temp	Weight Loss (mg/cm ²⁾
HCI - 5%	24 hrs	95°C	0.79
HNO3 - 1M	24 hrs	95°C	0.49
HF - 10%	20 min	20°C	5.18

Na ₂ CO ₃ - 0.02N	6 hrs	95°C	0.16
NaOH - 5%	6 hrs	95°C	1.83

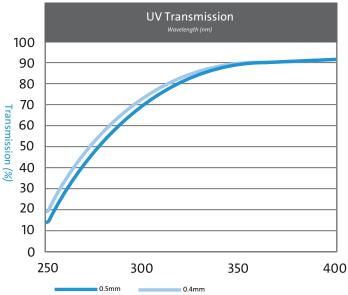

Total alkali content is approximately: 0.1wt% (Typical <0.05wt%)

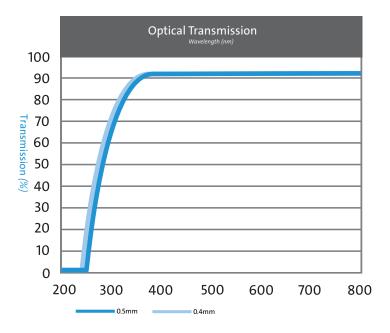

Weathering: 1

Weathering is defined as corrosion by atmosphericborne gases and vapor such as water and carbon dioxide. Glasses rated 1 will almost never show weathering effects; those rated 2 will occasionally be troublesome, particulary if weathering products cannot be removed; those rated 3 require more careful consideration.

Transmittance

Thermal Conductivity Thermal conductivity is a calculated value, and is equal to the product of the thermal diffusivity multiplied by specific heat multiplied by density of the glass.
