

Help us identify the right contact?

Megaton Program- Supply Chain Decarbonization

As part of this program, we will be requesting suppliers to report through the CDP platform and need to identify the right contact person to send information regarding the engagement to.

The CDP Questionnaires ask you to report information such as: your risks and opportunities associated with climate change and water, your emissions, your water withdrawals, details on your emissions and water management strategy such as targets, and actions you've taken to reduce your emissions and water impact.

The most appropriate person to respond is typically someone responsible for environmental management and disclosure (e.g., someone in ESG, environmental sustainability, corporate responsibility or facilities management).

Can you please share the contact information for the best person within your organization to respond to this request?
