

IMAGINATION IS THE HEART AND SOUL OF SCIENCE.

Joseph Regan

Astonishing things happen when art and science come together. To unravel mysteries and reveal possibilities.

To crack the complex and clarify the obscure. To broaden insight and spark innovation. As scientists, you have pooled your talents and knowledge to harness the power of imagination. You have faced the darkness of disease and unleashed the healing light of science. And you have achieved more in less time than ever thought possible. At Corning, you have inspired us to dig deeper and dream bigger in our ongoing quest to advance the art and science of research.

Our heartfelt thanks to you — for all you do and will do. Learn more at www.corning.com/lifesciences.

The Art of Science. Inspired by you.

CORNING

2021 CORNING LIMITED EDITION POSTER

Corning celebrates the art of science with a series of posters designed to capture the symbiotic nature of these two inextricably linked disciplines. It recognizes the fact that there is an art to science and a scientific foundation to creating art. Silver Heart is an original image by Corning customer Dr. Joseph Regan, an Irish artist and scientist who uses advanced digital and contemporary photography techniques to explore our perceptions of life and the world around us.

SILVER HEART | Joseph Regan, Ph.D.

Immunofluorescence micrograph of a colon cancer patient-derived organoid in Corning® Matrigel® matrix. Cells are stained for F-Actin (red). Nuclei are counterstained with DAPI (silver).
