The UltraSort II is a flexible, high-throughput, fully automated platform that incorporates any Tropel wafer flatness measurement system, providing full surface bow, warp, TTV, and stepper simulation parameters as described in SEMI M1. The UltraSort II can also accept additional modules including additional cassettes, another interferometer, OCR, ROA, and many more. The system modularity allows you to get more value out of your automated wafer flatness inspection system. The UltraSort II platform is designed to enable full factory automation including SECS/GEM, GEM 300 host systems, along with other custom data export systems.

**Key Specifications**

- **CE Compliance**
- **Semi S2/S8 Compliance**
- **ISO 9001:2015, 9014:2015, 14001**
- **NIST traceability on all Tropel® metrology systems**

**Available Wafer Configurations**

- 2"-6" Open Cassettes
- 4"-8" Open Cassettes
- 300mm FOUP

**Throughput**

**Wafer Thickness**

The FlatMaster product lines can measure the absolute wafer thickness as well as thickness variation, and free state flatness parameters. This technology enables you to control more measurement parameters with a single metrology tool. Requires tight environmental control for best results.

**OCR**

The OCR option fully integrates a Cognex OCR system into the UltraSort II. This allows the user to automatically store the wafer ID with every measurement in the measurement database and all data export formats, ensuring proper wafer measurement results tracking.

**Custom Exports**

Measurements in and of themselves are not useful unless the information is available where and when it is needed. Custom reports and exports allow the data to be shared throughout your company and enable process improvement and tracking. Export options include visual reports, database output, Microsoft Excel, and others.

**Roll-Off/ROA**

Roll-Off/ROA gives direct polishing process feedback for improved near edge flatness, which is critical to edge site yield. Roll-Off measurements are defined by SEMI MS9-0307 (preliminary).

**SECS/GEM**

Available with full factory automation that is SECS/GEM compatible and GEM300 compatible. Integrates your measurement system right into your factory host system to ensure perfect tracking of everything.

**Universal Chuck**

Identical in principle to a stepper chuck, but with zones to allow measurements of all wafer sizes from 2”-8” on the same chuck. Both clamped and unclamped measurements are possible with the same recipe — no unloading/changing chuck required.

**Film Stress**

Film stress can be calculated from the change in wafer curvature before and after a coating process, and is proportional to the wafer sag. Measuring the change of sag leads to an indirect measurement of the film stress. Material properties for the wafer and the film thickness must be known.

**Flexible Cassette station**

Flexible number of cassette stations (4-16), configured for 2-6 in. or 4-8 in. cassettes. Auto-detects cassette sizes, then scans for number of wafers per cassette and ensures no cross-slotted wafers.
